## Technology at work for you

### CONNECTING YOUR INDUSTRY OR MUNICIPALITY TO THE WATER PURIFICATION PROCESSES YOU REQUIRE

Sea Level Systems (SLS) was created in 2012 to satisfy the needs of a specialized clientele requiring technical assistance utilizing reverse osmosis and other membrane treatment technologies. Our qualified staff provides system upkeep and modest-sized revisions as well as complete system supply.

We focus on engineering design and training services to our worldwide clientele who are familiar and comfortable with the expertise of the SLS Staff.

The Company was recently invited to submit background documentation to prequalify as a Municipal System Supplier for a large-scale facility. With prequalification approval and effective pricing in competitive bidding, SLS was awarded the 2.2 MGD Expansion to the St. Lucie West Reverse Osmosis Water Treatment Plant located in Southeast Florida.

Successful, on time and under budget start-up and commissioning of that facility was accomplished. SLS is now further involved in Municipal Water Treatment supply having been asked to duplicate similar services for several other Drinking Water facilities located around the United States and throughout the Caribbean.

In addition to large-scale Municipal projects, SLS is also a membrane system design, installation and solution provider for Industrial and Commercial applications in the USA and Caribbean. We maintain a representative background in Golf Course and specialized Irrigation applications as well as the same in the Coal and Mining Industries.

With the Company's Key Employee involvement in hundreds of related projects through the years, SLS has the ability to form complete qualified Teams of Companies dedicated to providing services for Water Treatment processes within these Industries.

### SLS TEAM SOLUTIONS

- ▢ Membrane Technology
- ▢ Nanofiltration/Membrane Softening
- ▢ Reverse Osmosis (Brackish & Seawater)
- ▢ High Pressure Membrane Treatment
- ▢ Multiple Staged Treatment for Maximum Reduction of Concentrate/Waste
- ▢ Innovative Pre- and Post-Treatment Design Configurations
- ▢ Custom Designs for Each Feed Water Source Considered for Treatment
- ▢ Evaporation
- ▢ Crystallization
- ▢ Pressure Filtration

### SPECIALIZED SLS TEAMS PROVIDE "A to Z" SOLUTIONS

Our creative Teams recognize the need to inexpensively, yet effectively purify water for specific applications. Our Teams have been and can be formed to provide a technology and process for treatment of water used in your specific operations.

Members of our focused Teams have been providing knowledge and expertise of water treatment for over 30 years. With our specific use of Membrane Technology and other proven processes, our Teams can design/build, install and start-up a turnkey treatment facility to keep your water within the guidelines of State and Federal Regulatory Agencies. We can also provide long-term cost-effectiveness that will ultimately save your Organization profit over time.

## CUSTOM SOLUTIONS

We treat each proposal request and potential project's feed water like a "fingerprint". Each one different and therefore requiring Custom Designs for individual treatment.

*...from Golf Courses to Gold Mines...*

## FLEXIBLE OPTIONS TO MEET YOUR NEEDS

Sea Level Systems creates alliances with strategic General Contractors, Pre- and Post-Treatment equipment manufacturers that design for your specific feed water requirements. These Team members are those Companies that provide the "core" equipment necessary to meet the needs of your individualized water treatment process.

We maintain flexibility in the selection of Team Members when appropriate. We do so because the cost-effectiveness of your treatment needs can best be met utilizing local, qualified General Contractors that are familiar with the technological requirements your project may demand. We make it a priority to select those Contractors who are already familiar to you and who may have previously been a Supplier to your Organization.

## SPECIALIZED APPLICATIONS

Your water treatment solutions are met by our Team(s) using various types of Membrane Technology. We create added value by using creative treatment components that reduce Capital and Operation cost initially and over time.

The protection of valuable landscaping at Resort locations and turf at landmark Golf Courses as well as Grass Race Courses requires knowledgeable experts to guarantee the continued long-term protection of your valuable scenic and exotic greenery. We assemble the best Team by integrating your chosen experts and working with or for them on your behalf to ensure the best result with your complete satisfaction specifically in mind.

For the Coal Industry our Team's expertise designs purification methodology for the treatment of Mine drainage water. Large volumes of water are being used in the Coal Mining process. These waters must be treated prior to discharging back into local streams, or prior to reusing the water again. State and Federal Regulatory Agencies have or will soon be implementing strict regulations which will require Mining Operations to keep the parameters of the water elements within certain parts per million based on the criteria of the law. SLS and it's Project Teams each has the innovative water treatment solutions for your Industry to meet these existing, or soon to be enacted, strict regulations.

DESIGN  
ENGINEERING  
TURNKEY PROJECT DELIVERY  
HANDS-ON TRAINING

Sea Level Systems has the qualified experience to Design complete Turnkey Projects based on your unique Feed Water treatment needs. We have the skills and training ability to educate your chosen group of Operators.

For all of your Irrigation, Drinking and Mining Water Treatment needs – from Golf Courses to Gold Mines – the SLS Team is ready to provide the cost-efficient and effective Water Treatment Equipment using state of the art technologies.
